

QUICKTRACK PROFESSIONAL ASSET LENDING MANAGEMENT SOFTWARE

Professional Asset Collection And Lending Management With Ease Of Use As Standard

Peninsula QuickTrack professional tracking software helps you maintain and check the location of items amongst many users and locations.

Designed to be as user friendly as possible, QuickTrack combines an SQL driven database with an easy to use interface and Barcode technology.

You can connect a barcode reader directly to the software or alternatively collect the codes with a Symbol SPT with the QuickTrack for SPT software installed or use a Peninsula Blackbird remote data capture unit. This functionality is seamlessly integrated for maximum ease of use.

If you wish to interact with your existing SQL database system, QuickTrack can also act as a front end to your existing data management system.

QuickTrack can also be networked for maximum use of distributed resources, this can be accomplished either via traditional database clients or via the integrated web server.

Everything You Need Is There

Other products say they include everything, this product does. Everything you require to start tracking and lending is included in the price. Includes Automatic Cataloguing for Books, DVD's and CD's, Circulation Management (Booking in and out), User Management, Item Management, Location Management, Reporting (electronic and paper based), Barcode and Label printing.

The product is designed for any size implementation, so whether you have 100 assets or 100,000 books the database can cope. You can choose to run as a standalone or networked system, it really is up to you.

Low Running Costs

Unlike other management systems, everything is included in the price. There are no extras to buy, you do not have to pay extra for online automatic cataloguing, label and barcode printing, internet enabling, remote asset collection, or export and importing. This is all included in the one price.

Integrated Printing

The integrated reporting engine, preloaded with many reports and labels, is based on the industry standard Peninsula Barcode software used by the worlds leading companies for barcode creation.

Fast Setup And Easy Learning Curve

Be up and running in 5 minutes thanks to the integrated setup wizard. The system is organised around a simple index system from where you can do anything simple enough for users from 5 to 95, don't let this simplicity fool you though. Hidden behind this is one of the most advanced, powerfull asset management tools in the world today.

FEATURES

- Collection and Lending Management System for complete control of tracking Items, Assets and Collections
- Powerful, Professional and easy to use
- Available As A Complete System
- Includes Automatic Cataloguing for Books, DVD's and CD's, Circulation Management (Booking in and out), User Management, Item Management, Location Management, Reporting (electronic and paper based), Barcode and Label printing
